

	Every financial transaction, regardless of activity and source, flows to one common G/L
	All data, regardless of type, resides in one database.
	Project costs automatically roll into G/L; rapidly calculate accurate earned value for projects. True mixed mode manufacturing: discrete, repetitive, lean, process
	Supported localizations are in the core code; require no additional installation All supported languages (22) and localisations for 31 countries, including double byte, are in a single instance.
	Open platform support fits into IT systems, lowers TCO and shortens deployment and training.
	Robust options for complete technology stacks.
	A complete SOA architecture with extensive content and services. Easy to integrate with open API's and Business Service and File Transfer.
	Independence between tools layer and applications layer permits tools and technology upgrades ahead of applications upgrades – you can uptake new technology changes and system improvements faster .
	With the independent tools layer, changes to applications' security, usability, and performance are promulgated simultaneously across all modules.
	Built in lifecycle and change management tools work together across the entire system.
	Flexibility and easy-to-change System setup after go live: <ul style="list-style-type: none"> ➔ The System remains the Solution ➔ Short time frame from Idea to Action
