dropZone

Making JDE work
for you

Boost productivity by adding and updating
thousands of EnterpriseOne records in minutes!

What is dropZone?

Upload and extract data in JD Edwards EnterpriseOne, validated against regular EnterpriseOne constraints on the fly.

You can add items, item branch records, costs and base prices within one single drop. More than 70 standard templates are available for you ready to use. Define the necessary fields and descriptions and fill your template with data. Or extract data out of your EnterpriseOne system, change values and drop it back again. In addition create your own orchestration and use it in dropZone. Data Management made easy.

Features

Online Validation

dropZone communicates with your JD Edwards EnterpriseOne system to either add, update or extract records. If errors occur, a detailed list shows you which records had issues. Simply correct the template and drop the sheet again.

Download Data

Simply select your data for the download and drop the sheet. You receive all data for the selected records. Change them and drop your changes back to JD Edwards again.

Available Forms and Orchestrations

More than 70 forms are available for all different EnterpriseOne Master Files. Forms could also be combined to an entity to drop data for multiple forms at the same time. Or create an orchestration and select it in dropZone.

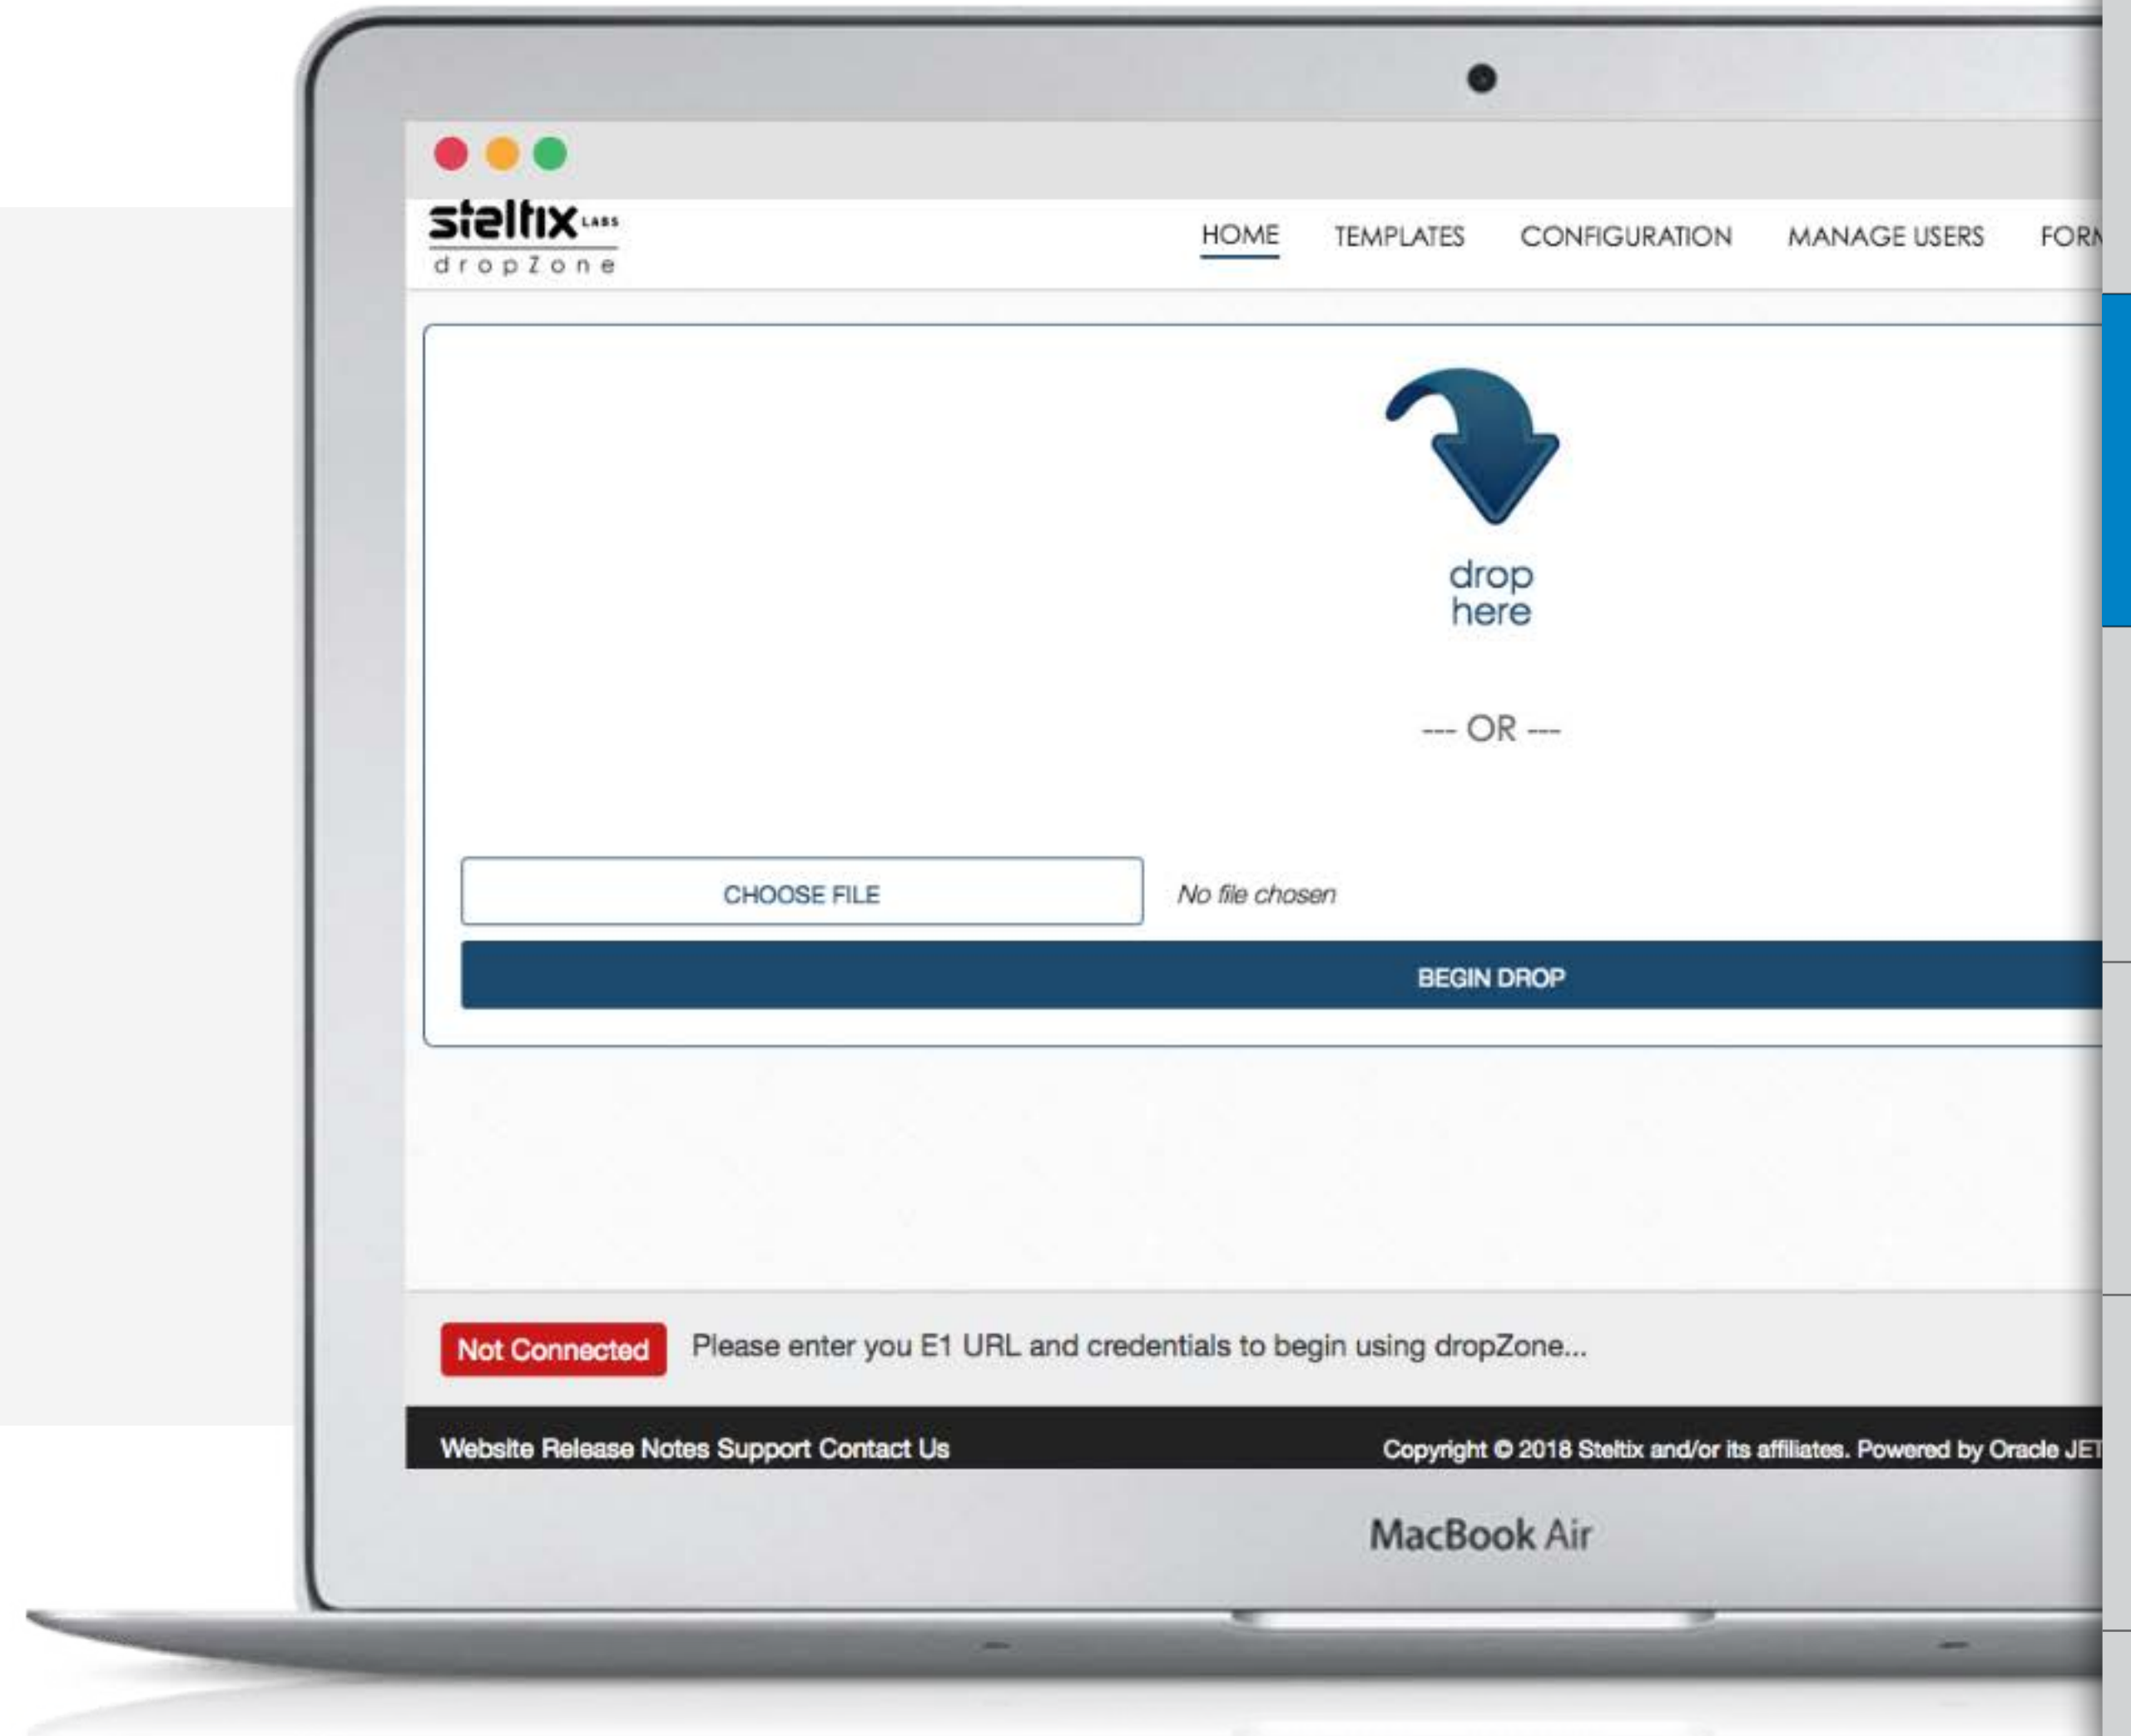

Cloud Solution

dropZone is a Cloud Solution that connects to your JD Edwards EnterpriseOne environment via your Oracle Application Integration Services Server.

Your Benefit

-  Easy download and editing existing data
-  Quickly add new data records
-  All data is validated online
-  No modification in JD Edwards EnterpriseOne necessary

Minimum Technical Requirements

- ✔ JD Edwards EnterpriseOne Tools Release 9.1.5 or higher
- ✔ JD Edwards EnterpriseOne Application Integration Server (AIS) 9.1.5.1 or higher
